

100% Positive Grease and Fluid Identification

Different equipment, machines, vehicles and bearing types require different types of grease. Positive identification of grease installed in a traditional grease gun is impossible without opening and taking the tube out. Clear Tubes allows for **Quick Visual Grease identification** eliminating the risk of mixing incompatible, unspecified, or beyond shelf life grease. Over 50% of bearing failure is due to wrong grease type.

Built To Last and Military Approved - 3 YEAR WARRANTY

The High Strength Version 2 Clear Tube and **T 6061 Aircraft Aluminum** Adapters create one of the most durable tube assemblies in the industry. Traditional steel tubes are subject to damage in the workplace or field through drops, hits from other tools, rust and general use.

The Clear Grease Gun Tube design is impervious to damage due to their **High Impact, Fracture-Resistant Polycarbonate**, capable of withstanding heavy use and high temperatures. The Concentric and Smooth Shell eliminates waste from grease bypass saving grease and messy squeeze out.

- **2011 Version 2 Clear Tubes are 35% stronger – Original manufacture for all clear tubes Worldwide**
- Provides 100% Positive grease or fluid type identification...Everytime! and 100% Recyclable
- Provides Visibility to remaining grease in tube of gun, bulk or suction gun applications.
- Provides Visibility to air pockets, separation and contamination
- Eliminates Risk of mixing incompatible, degraded or expired shelf life greases or fluids
- Approved for use by all branches of the U.S. Military, NSNs are available.
- Anodized Collars available in 7 colors, perfect for when a secondary method of identification is necessary.
- Tubes fit many standard grease guns, making upgrades of existing guns easy and cost-effective.
- Lube Point Positive ID System (LPPID) is a patent pending 7 color coordinating system- Match tube color to Zerk
